Professional Summary

Senior Full-Stack Engineer with 9+ years building production systems at scale, across Fortune 500 companies (JP Morgan Chase, McKesson) and cross-platform apps with 17,000+ downloads. Expert in Java, Spring Boot, Node.js, React, Flutter/Dart, AWS. Combines strong product instinct (Figma to production) with deep backend and cloud engineering. Proven track record of shipping products independently, mentoring teams, and eliminating manual work through automation. I love building products. Currently expanding into AI, integrating LLM-powered workflows into production systems.

Employment

Senior Principal Software Engineer · Script Health · Chicago, IL

June 2026 - Present

- › Lead a team of full-stack developers in building and scaling a healthcare platform focused on achieving product-market fit.
- › Drive end-to-end feature development across the frontend, backend, and cloud infrastructure. Collaborate with product, design, QA, and business stakeholders to define requirements and deliver customer-focused solutions.

Senior Software Engineer · Script Health · Chicago, IL

May 2023 – June 2026

- › Built a pharmacist prescribing portal serving McKesson and 150+ pharmacies to prescribe medicines and vaccines directly under collaborative practice protocols — removing the physician dependency and expanding clinical capabilities at the pharmacy level. Delivered as part of a cross-functional team including US, Poland, and Ukraine contractors.
- › Architected and built a real-time insurance claims processing pipeline — designed the end-to-end system for NCPDP D.0 data conversion, transforming and ingesting claims data into our database, routing to Stedi for live adjudication, and surfacing rejection reasons directly to pharmacists. Handled submissions, rejections, reversals, and resubmissions across all legacy PMS systems via BIN/PCN routing.
- › Owned HIPAA-compliant data extraction pipelines — aggregated pharmacy performance, patient activity, and claims data across multiple databases and exported to Looker, enabling McKesson (Fortune 500, #9) and internal business teams to build operational dashboards. McKesson onboarded Q2 2025.
- › Designed and implemented event-driven, cloud-native systems using AWS (Lambda, S3, RDS), enabling secure file ingestion, background processing, and scalable integrations across 150+ pharmacy partners. Owned UX flows end-to-end — from Figma wireframes to production — for core clinical workflows including prescribing, claims submission, and pharmacy onboarding. Collaborated across product, design, and business teams in a distributed US and international team setup.

Software Engineer, Intern · Script Health · Chicago, IL

June 2022 – May 2023

- › Built a critical feature enabling pharmacists to perform point-of-care testing and medication prescribing, contributing directly to core clinical workflows.
- › Drove pharmacy onboarding automation (DocuSign, UI provisioning, dashboards), eliminating ~100 hours of manual work per cycle and enabling rapid scaling to new pharmacy partners.
- › Delivered full-stack features using React, Node.js, and AWS, increasing sprint throughput and accelerating feature delivery and also contributed to UX design and implementation of user-facing screens aligned with business and regulatory requirements.

Associate Software Engineer · JP Morgan Chase & Co. · Hyderabad, India

July 2017 - August 2021

- › Introduced and streamlined spring cloud microservice architecture, utilizing Netflix Eureka for discovery, Zuul for routing, Open-Feign for inter-service communication, and Sleuth/Zipkin for distributed tracing, and also made 30% of APIs reusable across the LOB (line of business) and increased overall productivity.
- › Achieved firm goal by migrating 100% applications from O-Auth2 authentication to Microsoft Windows Active directory mechanism and legacy applications to the pivotal cloud.
- › Mentored fresh hires and instructed/guided a team on spring-boot to transform QA resources to developers.
- › Automated deployments through a web application with bulk git operations, that saved the team 3 hours of manual work per release. Employed Python, Angular, and Bitbucket APIs to achieve this efficiency.
- › Followed 100% Agile practices and collaborated on DevOps tools like Jira, Bitbucket, Jenkins 2.0, Black Duck, Sonar for CI/CD.

Graduate Assistantship · Illinois Institute of Technology · On Campus

Aug 21 - May 2023

- › Automated large-scale academic operations using Google Apps Script and Workspace APIs, supporting tutoring programs across multiple departments.
- › Built real-time availability tracking, scheduling, and notification systems, significantly reducing administrative overhead.
- › Developed an AI-generated content detection system using GPT-2 and BERT, delivering document-level AI plagiarism probability scoring.

Early Career UI/UX & Freelance projects

Jan 2014-July 2017

- › Developed an Android application in my second semester to help prevent bullying, enabling students to send instant, one-tap home-screen alerts with location data directly to the anti-ragging squad. Designed the UX India 2016 conference app and contributed to Android/iOS development for multi-day event experiences.
- › Delivered freelance UI/UX projects for restaurants and led branding and visual design for a university cultural festival.
- › Built Android applications including a one-tap emergency alert app with real-time location sharing & responsive web applications.

Independent Projects

**All below applications were designed in Figma and primarily developed by me, with collaboration on select projects.*

Roamates App (2025-2026). [\[android\]](#) [\[iOS\]](#) [\[flutter package\]](#)

Flutter · Riverpod · Node.js · Postgres · Redis · WebSockets

Roamates is a super-app for groups — combining shared expense management, real-time location sharing, and trip coordination into one platform with a roadmap expanding into shared notes, checklists, trip planning, and chat.

- › Founded, designed, and led development of the entire product — sole UI/UX designer in Figma, lead Flutter engineer, and technical architect across frontend and backend systems.

- › Architected a real-time location sharing system using Redis and Web Sockets, enabling live location updates across trusted friend circles — deployed across multiple regions via Fly.io for low latency. Engineered the full backend in Node.js, deployed to Fly.io across multiple regions, with Postgres (hosted on Neon DB) as the primary database — designed for scale from day one.

Chain-Reaction (2021-2022). [\[play on web\]](#) [\[android\]](#)

PWA · JavaScript · Firebase Realtime Database

A real-time multiplayer strategy board game for 2 to 4 players, featuring deterministic chain-reaction, AI gameplay, and cross-platform support across web and mobile using PWA and zero dollars spent.

- › Built and shipped the entire product independently ~~prior to the availability of generative AI agents or tools~~, right after COVID, relying on first-principles problem solving and algorithmic design.
- › Achieved ~~17,000+ downloads, ≈150,000 in-app likes~~, and strong user feedback (♦4.7 rating on play store) without spending any infrastructure cost, leveraging GitHub Pages for hosting and Firebase Realtime Database for online multiplayer features.
- › Developed an AI player using the ~~alpha-beta pruning algorithm~~, optimizing decision trees for efficient and competitive gameplay and implemented a real-time game state synchronization system enabling concurrent multiplayer gameplay.
- › Architected the entire system end-to-end, balancing performance, scalability, and cost-efficiency using serverless and client-driven design patterns.

Escape Game (2024-2025). [\[play on web\]](#) [\[android\]](#) [\[iOS\]](#)

Flutter/Dart · Firebase

A sliding block puzzle game where players must strategically move tiles to free the green block. Built using Flutter and Firebase. Inspired by a physical board puzzle at the Museum of Illusions in Chicago; after finding no comparable mobile version on the App Store or Play Store, I designed, developed, and deployed a cross-platform game for iOS and Android.

- › Reached 500+ downloads across iOS and Android with ≈3,000 in-app likes, demonstrating early user adoption and engagement.

Ephileo - build products people love (2026). [\[web link*\]](#)

React Three Fiber · Three.js · React

Designed and developed a personal product studio and portfolio website showcasing end-to-end projects and product thinking.

- › Built an interactive 3D cityscape using React Three Fiber, where navigable, clickable elements route users to project showcases, an about section, and a contact interface.

Portfolio (2021). [\[Figma link\]](#) [\[web link\]](#)

Built a website using HTML5/CSS and JavaScript by first sketching on Figma and then started developing from scratch using vanilla JS. Drew inspiration from award-winning (Awwwards-featured) websites, translating modern interaction patterns and visual design principles into a performant, custom-built web experience.

Paper Clip (2019). [\[git\]](#) To build a bookmarks tool with zero cost, developed an API REST service that extracts thumbnail link, title, description from any URL using Node JS as back-end without any price.

Academic Projects

- › **ChatGPT detector** (2023). Developed and hosted an application for our university (Illinois Tech) to help professors and TAs to grade student marks. Python Flask, React, Docker, AWS.
- › **Head Pose Detection** (2022). Imagine interacting your computer with your head & eye contact instead of mouse/ trackpad. Approached with Machine learning (CNN) and Computer Vision architecture with ~70% accuracy. [\[git\]](#)
- › **Anti-Ragging Application** (2014). The App allows users to send location of bullying information to the selected, 5 officials of a university on a single tap from home screen. The initiative was featured in multiple newspapers back in India. Android, SMS module, GPS location.

Languages, Key Skills, & Technologies

- › **Languages & Frameworks:** Java, Python, HTML/CSS, JavaScript, TypeScript, React JS, Flutter Dart, Spring Boot, Node.js, Angular, R, C, Selenium, CI/CD Pipelines
- › **Databases & Storage:** SQL, Oracle, NoSQL
- › **Cloud & DevOps:** Pivotal Cloud, Docker, Kubernetes, AWS (Lambda, RDS, EC2), Azure, Google Cloud Platform (GCP), Git, Jenkins 2.0, Bitbucket
- › **AI/ML:** OpenCV, Statistical Learning, Natural Language Processing, Machine Learning, Big Data Technologies
- › **Tools & IDEs:** VS Code, Figma, IntelliJ, Jupyter, SQL Developer, PyCharm, Android Studio, Toad, Xcode, Unix, bash/zsh, Adobe Suite, Black Duck, Sonar
- › **AI Tooling & Automation:** n8n, Claude Code, Codex, Exo (local LLM cluster setup), LLM APIs (Claude, OpenAI)
- › **Others:** Version control, Test automation, User experience,

Education

Chicago, IL

Illinois Institute of Technology

Aug 21 - May 2023

M.A.Sc. in Artificial Intelligence - **GPA: 3.6**

Graduate Coursework: Statistical Learning, Introduction to Artificial Intelligence, Natural Language Processing, Computer Vision, Machine Learning, Big Data Technologies, Online Social Network Analysis, Neuroimaging.

Hyderabad, India

VNR Vignana Jyothi Institute of Engineering & Technology

Sept 2013 - May 2017

B.Tech. in Computer Science & Engineering (CSE) - **GPA: 3.6**

Undergraduate Coursework: Design & Analysis of Algorithm, Advanced Data Structures, Operating Systems, Cloud Computing, Web Development, Databases, Programming Languages, Computer Architecture, Computer Networks, Compiler Design
